

Before founding GuardTools, I used to work as a patrolling guard myself. Having scribbled down the barely readable details of a nightly incident one time too many, I started academic studies to see how ICT could benefit guarding.

My studies found that many guarding companies were struggling with low profits and their only competitive argument was about lowering costs. Modern IT is changing the perspective, new tools for operational support are helping guarding companies to increase service levels and bring new values to customers, shifting the focus away from destructive cost competition.

As the most complete operational support solution on the market, GuardTools enables guarding companies to offer a far more valuable service with rigid quality assurance to their clients.

We would love to get in touch with you to tell you more about how Guardtools customers have managed to outperform competitors. And how for instance property owners have taken charge over their security with GuardTools.

Peter Andreasson
Founder
GuardTools

Engineered for stability, security and scalability

Our solution for manned guarding companies consists of a handheld computer for in-field usage and a highly competent planning and administration application run on a desktop.

Guardtools Mobile

Built on proven Windows Mobile technology for rugged devices, but soon available on Android units as well. Functionality includes:

- Alarm response
- RFID, Bar-codes
- Yes/No questions
- Photos
- Numerical values
- Predefined events and actions
- Offline support

Guardtools Office

Windows application to be installed on desktop PC's and used by administrative personnel. Important features are:

- Patrol planning
- Customer contracts
- Automated reports
- Command and Control
- Rights management

Guardtools Web

Web portal available online to end-clients, supporting commonly required tasks such as:

- Statistics and risk analysis
- Extensive database search
- Drill down functionality
- Data export
- Customised searches

Guardtools Static

A set of functions in the GuardTools desktop client, specifically designed for stationary guards, such as receptions or vehicle gates. Among the key features are:

- Time controlled reminders
- Planning of periodic tasks
- Work force Instructions
- Work shift sharing
- Ad-hoc action reminders
- Event & action logging
- Workflow traceability

Delivered as a Service

Hosted and maintained, the Guardtools platform is constantly available for customers over secure internet connections. This makes GuardTools easy to

set up and fully scalable for your business growth. You pay only for what you use. Fixed costs of server management and maintenance are shared by multiple customers. Continuous updates are provided all-inclusive, no need for system hardware installation at own premises and no in-house IT expertise is required. System support comes free of charge, extended helpdesk and support packages with guaranteed response-times and around-the-clock responsiveness are available.

As a whole, GuardTools helps you to solidify internal processes, assure quality and fulfill service level agreements.

Simplifies patrol reporting

Predefined event types and actions save time and encourages reporting by officers in the field. Free-text and photos are used for more detailed reports.

Streamlines control and operations

Lowered burden on operations and increased control over information with storage of all information in one place. Instructions are available directly to officers and new routines updated automatically.

Enables pro-active security

Stores reports in digital format for presentation on maps and in diagrams, presents security managers a bird's-eye view of risk areas.

Guarantees contract fulfillment

Contract data is used for patrol planning, handheld computer usage enforces all tasks to be reviewed before a work shift can be ended, eliminating all risks of missing tasks.

Distributes reports automatically

Summarises and distributes reports to end-clients, with the right data for the right recipients, always on time.

GUARDTOOLS®

GUARDTOOLS®

Developed in Sweden by Blue Mobile Systems AB

Blue Mobile Systems is situated at Lindholmen, in the heart of the international ICT cluster in Gothenburg. With an extended network of customers in Scandinavia, Blue Mobile Systems is currently expanding into the pan-european market. Guardtools is immediately available in Danish, English, Finnish, German, Norwegian, Swedish and Polish. Translation to other languages can be arranged upon request.

Your next steps
